- MySQL
- ES6
- JSON
- Express
- Command Line
- Relational Databases
- Frontend Development
- Responsive Design
- Unit Testing w/ JEST
- Project Planning
- Fetch
- jQuery
- Leadership/ Teamwork

## PROJECTS

### Mickey-N-Friends Finder

- HTML, CSS, JavaScript, Bulma.js, Omdb API, Disney API

Created a website that allows a user to search their favorite Disney character and get information about what shows or movies they appear in. My role was to Implement Fetch API methods between two third-party APIs, parsing JSON content into a dynamic web experience for the user.

### Wish List

- HTML, CSS, JavaScript, Bootstrap, Express.js, Handlebars.js, Sequelize

Developed an experience where users could create an account and add as many wish lists or registries as they wanted, allowing them the ability to include things like names, descriptions, links, and prices. Users could also include dates, and assign them to a category. My role was to create a seamless front end using Handlebars.js and Bootstrap.

### Pokedex Tracker

- React, CSS, JavaScript, GraphQL, MongoDB, Express

Created a web application where users and fans of the game Pokemon could keep track of how many they have caught. A user can login, checkoff pokemon they have caught, uncatch, receive badges for completion, customize their user sprite and more. My role was to create the entire front end of the website using React components and state as well as using Fetch API methods to retrieve specific information from the game.

## WORK EXPERIENCE

### General Contractor

2019 - 2022

Led remodeling projects for several homes. This included managing budgets, subcontractors and suppliers, and meeting strict deadlines. Additionally, I worked within city and state codes obtaining the necessary building permits to ensure the work was complete safely and to the satisfaction of the clients.

## EDUCATION

### Certificate

Full Stack Web Developer  
UC Berkeley Extension  
2022

### Bachelor of Science

Recording Arts  
Full Sail University  
2017-2019
